CONTENTS.

	Page
On the Inland Navigation of the United States of America, Part I.	1
Comments on Corpulency. By William Wadd, Esq. F.R.S.	16
On the Origin of Air Balloons	29
An Essay on the Remittent and Intermittent Diseases, &c. by J. Mac Culloch, M.D. &c. *reviewed*	34
On Mineral Waters, Natural and Artificial. Communicated by Mr. A. Walker	62
Natural History of the Earwig	78
The Characters of Achatinella, a new group of terrestrial Shells, with Descriptions of six Species. By William Swainson, Esq. F.R.S. L.S. &c.	81
On the Comparative Population of the World in Ancient and Modern Times	86
An Account of a New Genus of Plants, named Macræa. By John Lindley, Esq. F.R.S., &c.	104
On the Comparative Merits of the New Refracting, Reflecting, and Single Microscopes, with a Vindication of Microscopic Science, and its votaries. By C. R. Goring, M.D.	107
Hieroglyphical Fragments	122
On the Climate of the Canary Islands	123
On a Figured Variety of Coal, occurring in the Coal-field of Glamorganshire. By J. Mac Culloch, M.D. F.R.S.	131
Remarks on the Ruins at Palenque, in Guatemala, and on the Origin of the American Indians. By John Ranking, Esq.	135
On the Presence of Chlorine in the Black Oxide of Manganese	154
Extracts from Dr. Yeats's Lectures on the Colon	156
Proceedings of the Royal Institution	167
On the Resonances, or Reciprocated Vibrations of Columns of Air	175
On the Recent Improvements in the Art of Printing	183
Proceedings of the Horticultural Society	192
Astronomical and Nautical Collections	195
i. Simple Determination of the most ancient epoch of Astronomical Chronology, in a Letter to Francis Baily, F.R.S.	195
ii. Elementary View of the Undulatory Theory of Light. By Mr. Fresnel	198
iii. Principal Lunar Occultations of the Fixed Stars in the months of May, June, July, and August, 1828, calculated for the Royal Observatory at Greenwich. By Thomas Henderson, Esq.	215

DeGolyer

MISCELLANEOUS INTELLIGENCE.

I. Mechanical Science.

Page

Medal for Chemical Discoveries... 216
1 Motion produced by the contact of different substances ..... *ib.*
2 On a Difference in the Velocity of Intense and Feeble Sounds *ib.*
3 Distances at which Sounds are heard..... 217
4 On the Effect of Wind upon Sound ..... *ib.*
5 New Material for Paper... .. 218
6 Zinc Roofs 218
7 Method of obtaining the Figure of a Plant..... *ib.*
8 Assamese method of Blasting Rocks ..... *ib.*
9 On the Effects produced by Magnets..... *ib.*
10 On the Apparent Motion of a small Body in the immediate neighbourhood of a larger, &c. 219

II. Chemical Science.

1 Heat evolved during Combustion 220
2 Conducting Power for Heat of the principal Metals, and some Earthy Substances ..... *ib.*
3 On the relation of Water to Hot Polished Surfaces 221
4 On the Tension of the Poles of a Voltaic Battery 222
5 On Efflorescence ..... *ib.*
6 Anhydrous Crystals of Sulphate of Soda..... 223
7 Habitudes of Sulphuric Acid .. 224
8 On Iodo-fluoric Acid ..... *ib.*
9 On Testing the Presence of Ammonia in a Substance 225
10 Combination of Lime with Water *ib.*
11 Examination of Copper. Precipitation of Bismuth 225
12 Brown Oxide of Chromium ... 226
13 Accension of Arsenical Cobalt Ore *ib.*
14 Artificial Ultramarine ..... *ib.*
15 Ancient Cannon raised from the Sea ..... *ib.*
16 On the Active Principle of Hemlock 227
17 On the Identity of Althea and Asparagine ..... *ib.*
18 On Solanic Acid ..... *ib.*
19 Purification of Alcohol 228
20 Formation of Sulphuric Ether *ib.*
21 On Proust's Caseous Oxide, and Caseic Acid..... 230

III. Natural History.

1 Distribution of Nerves in Muscular Fibre 230
2 Disease of Silk Worms and its cure 221
3 Temperature below the Earth's surface..... *ib.*
4 Extraordinary Instances of Fall of Rain..... 232
5 Rain at Bombay ..... *ib.*
6 Meteorological Prognostication observed in the Shetland Isles *ib.*
7 Fall of Aërolites 233
8 Cold and Warm Localities in the Valley of Ouse, in Norway... *ib.*
9 Inflammable Gas from Salt Works ..... *ib.*
10 Potash in Mineral Waters ..... *ib.*
11 Heating Volcanic Products..... 234
12 Large masses of Native Platina *ib.*
13 Platina Sand of Russia ..... *ib.*

Summary of Meteorological Observations for 1827 . . . 235
Meteorological Table for December, January, and February . 236

CONTENTS.

APRIL to JUNE, 1828.

Page

MEMOIR on a New Calculation of the Latitudes of Montjouy and Barcelona; being a Supplement to the Base du Systême Métrique. By J. N. Nicollet, of the Royal Observatory, Paris . 237

On the Annealing of the Specula of Reflecting Telescopes. By J. MAC CULLOCH, M.D., F.R.S., &c. . . . 255

Comments on Corpulency. By WILLIAM WADD, Esq., F.L.S. . 268

Experiments on Heated Iron, in reference to the Magnetic and Electric Fluids. By WILLIAM RITCHIE, A.M., Rector of the Royal Academy at Tain 288

Modern Improvements in Horticulture 291

De l'Influence des Agens Physiques sur la Vie. Par W. F. EDWARDS, M.D., &c. 308

On Saline Manures. By C. W. JOHNSON, Esq. . . . 313

A Copy of the Law in relation to Weights and Measures recently established in the State of New York 319

Remarks on the Ruins at Palenque in Guatemala, and on the Origin of the American Indians, with a note on Fossil Remains. By JOHN RANKING, Esq. 323

Comparative History of America and Tartary . . . 356

Contributions to Experimental Chemistry 371

Earthquake in Colombia, November 16, 1827 . . . 379

Native Sulphate of Alumine, or Davite 382

Description and Analysis of a Mineral Water existing in the Andes, with a Test for Iodine 384

Earthy Bitumen, called Murindó 387

On the Mechanism of the Act of Vomiting. By MARSHALL HALL, M.D., F.R.S.E., &c. &c. 388

Illustrations of Nature; or, the Arrangement of Physical Existence, indicated in Outline 392

Account of a New Hygrometer, by GEORGE CUMMING, M.D. . 402

Report of the Commissioners appointed by His Majesty to inquire into the State of the Supply of Water in the Metropolis . 405

Proceedings of the Royal Institution of Great Britain . . 417

Courses of Lectures delivered at the Royal Institution during the session 436

ASTRONOMICAL AND NAUTICAL COLLECTIONS.

i. Astronomical Chronology, deduced from Ptolemy, and his Commentators 442

ii. Principal Lunar Occultations of the fixed Stars, calculated for the Royal Observatory at Greenwich. By T. HENDERSON, Esq. 468

MISCELLANEOUS INTELLIGENCE.

I. Mechanical Science.

	Page
1 Singular case of Inverted Vision	469
2 Fissures of Glass	470
3 Change of Crystalline State in a Solid Body	*ib.*
4 Hardening of Steel by a Current of Compressed Air	*ib.*
5 Tinning of Cast Iron Weights	470
6 Temperature of the Planetary Space	471
7 Mr. Watt's Solar and Lunar Compasses	*ib.*

II. Chemical Science.

1 On the Conducting Power of Bodies for Heat, and on a new Instrument called a Thermometer of Contact	472
2 On a Method of Measuring many Chemical Actions	473
3 On the formation of Fulgorites, or Lightning Sand Tubes	474
4 Preparation of Hydriodic Acid Gas	475
5 Test for Nitric Acid, and its combinations	*ib.*
6 On the decomposition of Ammonia, by the Metals	476
7 Preparation of liquid Ammonia	477
8 Solubility of certain Substances in Sulphuric Acid	*ib.*
9 On the Presence of Columbium as well as Titanium in Iron Slag	478
10 On Electrical Phenomena produced by Pressure, and the Cleavage of Crystals	*ib.*
Electricity due to Cleavage	479
11 On the Velocity of Sound in Water	480
12 Extraordinary Experiments on Heat and Steam	481
13 Iodides of Carbon	482
14 Method of discovering Potassa by the Blow-pipe Flame	483
15 New Variety of Borax	483
16 On the Chloride of Lime, or Bleaching Powder	484
17 On a Gaseous Fluoride of Manganese	486
18 Boruret of Iron	487
19 Decomposition of Salts of Copper	*ib.*
20 Discovery and Separation of Antimony from Lead, Copper, &c.	488
21 Singular Action of Arsenic Acid on Sugar	*ib.*
22 Preparations of Chromic Acid	*ib.*
23 Solubility of Corrosive Sublimate in Æther and Alcohol by Camphor	489
24 Method of preparing Ammoniuret of Silver, (fulminating Silver)	*ib.*
25 Bromide of Gold	*ib.*
26 Peculiar compound of Platina with Oxygen and Carbon	*ib.*
27 Composition of Carbazotic Acid	*ib.*
28 On Chevreul's Acid of Indigo	490
29 Artificial formation of Urea	491
30 Identity of Asparagine with Ageodoite	492

III. Natural History.

1 Dependance of Sight upon the Optic Nerves	492
2 Innocuous Nature of Putrid Exhalations	*ib.*
3 Detection of Blood	497
4 Globules of the Blood	498
5 Growth of Hair	*ib.*
6 Stammering	*ib.*
7 Communication of Disease by Leeches	499
8 Preservation of Leeches	*ib.*
9 St. Helena Silk	*ib.*
10 Migration of Butterflies	*ib.*
11 Nature of those Gelatinous Substances supposed to fall from the Atmosphere	500
12 Ancient Olives and Oil discovered at Pompeii	*ib.*
13 Effect of Electricity on pointed Leaves, &c. and on Vegetation	501
14 Echites Suberecta, or Savana Flower of Jamaica	502
15 Height of Mont Blanc	*ib.*
16 Water Spout	503

Meteorological Table for March, April, and May . . . 504

TO OUR READERS AND CORRESPONDETNS.

We have received two letters upon the subject of the Thames Tunnel: that signed "A Shareholder," is anticipated as to its contents by a *Letter* which has been published. The other, from "A Contributor to the Subscription," we recommend for the newspapers.

We cannot, at present, enter upon the subject of London Bridge and Thames-street; but believe that the apprehensions entertained by "An admirer of Sir Christopher Wren" are quite groundless.

A. B., on the Influence of Knowledge, &c., is not quite suited to this Journal.

As very partial and often garbled extracts from the Report upon the Supply of Water to the Metropolis, have hitherto only appeared in the newspapers, we have thought it right to publish the whole of that document.

We have again been obliged, in consequence of the pressure of other matter, to postpone the greater portion of Reviews of Books: the subject shall be attended to in our next Number. Several original communications and others have, for the same reason, been deferred.

Dr. Harwood's paper on the Whale tribe, being the substance of his discourse upon that subject referred to in the Proceedings of the Royal Institution, will be printed in our next Number: we much regret having

been obliged to omit it in its proper place. We have also been under the necessity of postponing an interesting Communication from Captain Sabine, upon the Steam Boats of the United States.

As we have declined the insertion of some communications upon the subject of the London University, we also think it right, for the present at least, to withhold the letter signed "Verulam," upon the subject of the new King's College.

Just Published,

CHEMICAL TABLES for the use of Students and Manufacturers. By WILLIAM THOMAS BRANDE, F.R.S., Prof. Chem. Royal Institution, &c. 8vo. price 8*s.* 6*d.*

TO OUR READERS AND CORRESPONDENTS.

We have to acknowledge the arrival of the following articles for insertion in this Journal, which will be duly attended to:—

On the Junction of Granite and Sandstone in Sutherland, by Dr. Mac Culloch.

On the Diluvium in Norfolk, by Mr. Rose.

On the Agency of Carbonic Acid, by Dr. Marshall Hall.

Continuation of the History of Horticulture.

On Malaria, as affecting Ships.

On the Aurora Borealis, by Mr. Kendall.

On the Ornaments of Architecture.

We have also been obliged to postpone the reviews and notices of several scientific works.

Our thanks are due to the suggestions of "A Constant Reader," who will perceive that we have attended to them.

The inferences of a correspondent at Manchester are wholly incorrect; the length of the communication, which would have occupied at least forty pages, and the refusal of the author either to abridge or divide it, were the reasons that induced us to return it. We are frequently obliged to refuse valuable papers upon similar grounds.

Dr. Mills's letter, from Bogota, has just reached us, and shall appear in the ensuing number of this Journal.

Mr. Johnson's paper on Saline Manures will appear in our next.

ERRATA IN LAST NUMBER.

In page	285,	line	32,	*for* rest,	*read* next.
	286,	„	22,	„ mean	„ mere.
	287,	„	15,	„ Russia	„ Prussia.
	do.,	„	do.	„ Siberia	„ Silesia.
	292,	„	12,	„ Property	„ Prosperity.

In the Ephemeris of Encke's Comet, published in the last number, the dates at the head of the columns are printed 1829 and 1830, instead of 1828 and 1829; the return of the Comet being expected in the course of the *present* year. The mistake was obligingly pointed out by Dr. Olbers.
